

Drunk Döner RPG (DDR)

Tasks

Development

Character design for the owner of the Döner shop

Character design for 10 npcs (customers)

Environment design of the street

Main menu, credits and how to play scenes design

Sound implementation

Pause menu design

Cutscene design:

1. Dialogues for the main character
2. Dialogues for the Döner shop's owner
3. Environment and camera set up
4. Fade in/out transitions between scenes

Fix problem with the npcs' hats

Fully fix pause menu

Notes

Final week! (for me because I already knew that I would use a joker the following week). The theme was very interesting but I didn't have time to brainstorm the idea for my game. Because Anna and Nat suggested me to team up with them right after the class and, at that point, they already had an idea. Due to the fact that I liked their idea a lot, I didn't want to think of something else and change the idea they came up with.

As usual (I feel like my every week starts with that), I started with the character design. The first character that I modeled was the owner of the Döner place - Mustafa. During our first discussion with my teammates we already have defined the art style for the characters: simple, funny, cartoonish, similar to the Mii characters. And, for the Mustafa specifically, we wanted to highlight his mustache. That is why I made it very big and even added joints to it during the rigging process. This way his mustache is a part of his every movement which looks funny and replaces his facial expressions.

As a next step, I created 10 npcs - customers. My main goal there was to make them simple to change but unique. For that I created the main body which was the same for all of them, made 10 textures with various faces and T-shirts colors. And then, made the accessories: 1 cap, 1 beanie hat, 1 long hair and 1 short hair. And it made the process quite simple. I just animated one body model and then exported all the models in Unity, just activating and deactivating different hats and hair. This way I made 10 npcs that have the same style but all look unique.

Then I worked a bit on the environment outside the Döner building. I downloaded a car model, made an additional model of the person, laying on the car, added skybox and some buildings. All those surroundings can be seen through the window near the cooking place.

Besides the environment, I also worked on the design of the Main Menu, Credits, Tutorials and Pause Menu. I feel like I do this part every week so nothing interesting here, except the Pause Menu. For some reason we had a whole bunch of bugs with the Pause Menu (the original script is not mine) and I tried to fix those issues because they seemed very simple. However, in the end, even after Nat redid the script for the Pause Menu completely, it still causes some weird bugs and we can't understand the reason for that. I will try to fix it again, not for the grade cause the deadline was a long time ago, but for myself. It is just very interesting and annoying at the same time, how this absolutely basic thing can be the only problem in the game that literally breaks the game, while much more complicated mechanics work fine.

In addition, as I was finished my tasks quite fast and Nat was very overwhelmed with scripting, she asked me to make the cutscene, where Mustafa hires the main character because they didn't want to pay for their Döner. This wasn't easy because for making this scene I had to figure out how the whole dialogue system works and I worked with the Scriptable Objects for the first time. There was nothing difficult but still, it was a new thing for me and took some time to understand. Also I made the fade in and out transitions between the scenes, also for the first time. I made it using Unity animations and black panels but I still believe that there should be a smarter way to do it, so it is a thing I would like to figure out in the future.

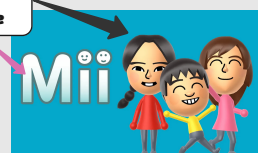

As a last step, I implemented the music.

Well, conclusion. Honestly, this week I have double feelings. On the one hand, I am very happy with our final result, the game is amazing and I am definitely going to put it on my website. On the other hand, I am not proud of myself at all. I accomplished all my tasks and I like how my characters look like, however, I feel like I could do better. I feel like Anna and Nat did an amazing job and put an absolutely crazy amount of effort in this game and I am a bit afraid that I could do more to help them but I don't know what exactly.
